

## International Virtual Event for Sustainable Energy Future for North America and South America (USA, Canada, Mexico, Brazil and Bolivia)

2<sup>nd</sup> May 2020

Student Energy at NED University has the privilege of organizing the biggest event ever in the history of Student Energy. This mega event brought together the students from 14 universities of 10 countries belonging to 5 continents. Due to the high number of participations and largely varied time zones in Northern and Southern hemispheres, we decided to split the event in to two days. On 2<sup>nd</sup> May 2020, we brought the students and energy leaders from North America and South America to discuss the energy scenario and progress towards the development of sustainable and equitable energy. The event was graced with the presence of chief guests, Dr. Scott Tinker (Director of Bureau of Economic Geology, University of Texas at Austin USA) and Ms. Olivia Reshetylo (Director of Global Youth Engagement at Student Energy).

The transition of world towards sustainable energy future was discussed and the main purpose was to bring people together on the same table from different regions of the world and to become the voice of 1.3 Billion people who don't have energy access to communicate.

Event Statistics: 3000+ Views, 38 shares, 4635 people reached and 68 comments
